

ASPHALT RELEASE AGENT

What is ARA?

Milligan Asphalt Release Agent (ARA) is an environmentally-friendly product which prevents asphalt, sealant, tar, and oil build-up on paving equipment (rollers, truck beds, tools, etc). ARA is ideal for all paving and can also be used as a pre-coat for truck beds hauling asphalt to prevent “stuck-on” or build up residue.

How is it used?

The recommended application procedure requires using a hand-held pump and spray wand system. Coating of equipment with Asphalt Release Agent prior to use and as required during use will deliver best results. In the case of over-application or spill of ARA, water must be used to wash/dilute the product to prevent asphalt breakdown or degradation.

Why should I use ARA?

Milligan Asphalt Release Agent is an excellent replacement for traditional products that are harmful to the environment. It provides heavy duty performance while being suitable for use in all paving situations. By following the recommended rates and application procedure, ARA is often required in less volume than that of other products available in the market place.

Milligan ARA has a perfect alternative for the Paving industry.
